Comments: Hello,

1 I happen to see this story on channel 11 news while I was working  
and decided to visit you website. [It really does not seem logical  
that you/they/them/whoever, this may regard, that transferring a waste  
product of this matter would ever even be considered. You should not  
have to ask anyone a question of this matter, let alone the people.  
"What happen to common sense" in this time we now live in.  
If there were no other means of transfer for this or other types  
of waste, the government should consider building special highways  
or some hightech railway to transfer these waste products, with an  
accident rate of 0% chance. The only possible way of an accident  
should happen is by natruall disaster, even that should not be a  
problem in the era we live.] "If a human being can go over the Nigra  
Falls in a barrel, then we should be able to build industructable  
containers. Well, gotta go, you have my input.

Excuse the misspelling, etc.
